These dental procedure codes, which are listed in the Preventive category of service in CDT 2021, may be used to document delivery of a COVID-19 vaccine on the condition that use of any vaccine is contingent upon FDA approval and state laws governing scope of practice. Dentists providing COVID vaccine in their offices may be required to submit data to the jurisdiction's immunization information system (IIS) aside from documenting in their patient record.

The resolution adopted by the CMC also addresses inclusion of the following procedure code in CDT 2021's Diagnostic's category of service.

- D0606 molecular testing for a public health related pathogen, including coronavirus**
